

# Meeting Prep Skill

A private daily preparation packet for Q / QAQ meetings, built from calendar context and the read-only Rockaway Q Brain.

WORD DOCUMENT + COMPACT CHAT SUMMARY

## What It Does

- Looks at the user's connected calendar/account context.
- Prepares every in-scope Q / QAQ meeting, with `today` meaning remaining meetings from now onward.
- Retrieves broad context from the separate Rockaway Q / QAQ QMD MCP, then expands canonical pages through the read-only Q brain MCP.
- Creates a dense executive Word document designed to read quickly before calls.

## What It Produces

- **Word:** the primary artifact, with no source trail.
- **Chat:** a short summary with file links and top priorities.

## Default Behavior

The skill creates one all-day packet by default. If run halfway through the day, it prepares upcoming meetings only. Use "whole day" or "include past meetings" when you want the full date.

It excludes declined and cancelled events, includes tentative events with a status marker, and creates only a stub for private/busy events with no details.

## 1 Install The Agent Plugin

### CODEX - ONE LINE

```
codex plugin marketplace add zabrodski/rockaway-qaq-meeting-prep-skill && codex plugin add rockaway-q-meeting-prep@rockaway-q-meeting-prep
```

### CLAUDE CODE - ONE LINE

```
claude plugin marketplace add zabrodski/rockaway-qaq-meeting-prep-skill && claude plugin install rockaway-q-meeting-prep@rockaway-q-meeting-prep
```

Each command installs meeting prep and both private brain connections together.

### MESSAGE YOU CAN SEND TO CODEX OR CLAUDE

Please install the Rockaway Q Meeting Prep Agent Plugin from its GitHub repository.

### AFTER SETUP, USE

```
$rockaway-q-meeting-prep prep me for today
$rockaway-q-meeting-prep prep me for my next meeting
$rockaway-q-meeting-prep prep me for tomorrow
```

## 2 The Q / QAQ Brain Is Included

The Agent Plugin connects meeting prep to the team-scoped brain automatically. Tailscale membership controls access; there is no bearer token to paste or store.

Fast QMD recall and canonical GBrain detail both run on the Mac mini. Nothing extra is installed locally.

### WHAT THE SETUP CONNECTS

```
rockaway-q
https://clawdbot--mac-mini.taild9e247.ts.net:8446/mcp

rockaway-q-qmd
https://clawdbot--mac-mini.taild9e247.ts.net:8444/mcp
```

### ACCESS REQUIREMENT

Tailscale: connected  
Team access: Rockaway Q / QAQ

### CSV OR QUICK LOOKUP PROMPT

Use Rockaway Q / QAQ QMD first for each CSV row, then use the Q brain MCP for canonical page expansion on the strongest matches.

### PORTABLE PACKAGE

```
plugin.json - plugin identity
mcp.json    - private brain connections
skills/     - meeting-prep workflow
```

The repository follows Agent Plugins 1.0 and includes current Codex and Claude Code compatibility metadata.

### 3 Read The Packet

#### Day Summary

Use the first page to see the main themes, urgent prep items, and the meetings that need the most attention.

#### Per-Meeting Sections

Each meeting has context, previous discussion, open threads, ownership notes, sensitive signals, suggested talk track, questions, and watchouts.

#### Recommendations

Suggested agendas and talk tracks are marked as recommendations, not retrieved facts.

#### Audit Trail

The Word document omits source details for readability. Use the chat summary for the highest-priority reminders.

### Output Location

```
~/Rockaway Meeting Briefs/q/YYYY-MM-DD/  
rockaway-q-meeting-prep-YYYY-MM-DD.docx
```

Same-day reruns overwrite the default Word document so the latest brief stays easy to find.

#### Use It For

- Product and operations meetings.
- Customer, project, and workflow discussions.
- Internal ownership and blocker reviews.
- Initiative planning and follow-ups.

#### Boundaries

- Read-only brain access.
- No calendar writeback.
- No direct brain edits.
- No source trail in the Word document or chat summary.

Rockaway Q / QAQ Meeting Prep Skill. Private meeting preparation using the Rockaway Q MCP brain.
